Information for Patients during and after Medication Abortion

Today, ___________, you decided to have a medication abortion, which is very safe and works almost all of the time. The first pill is called mifepristone (Mifeprex®).

___You took 200 milligrams of mifepristone in the office at _____am/pm.
___You will take 200 milligrams mifepristone at home on _____ at _____am/pm.

Most people do not feel any different after taking this pill. You may have some vaginal bleeding, which is okay. You can continue all of your regular activities.

We have given you prescriptions for the pain medicines ibuprofen and Vicodin® (5mg hydrocodone/325mg acetaminophen). You can take 2 ibuprofen pills (800mg total) 30 minutes before you put the misoprostol pills inside your cheeks; this may help reduce side effects.

The second pills are called misoprostol. Each misoprostol pill is 200 micrograms. On, __________, at around ________am/pm, you will put 4 misoprostol pills inside your cheeks as we have shown you. You should use these pills even if you have already started to bleed. After putting two pills in each cheek, let them melt/dissolve for 20-30 minutes. This lets the medicine get into your body. If any of the pills are left in your mouth after 20-30 minutes, you can swallow them with something to drink.

We have given you an extra dose of misoprostol (4 pills), in case you need it. You should:
___Save these and only use them if you call your provider and they suggest you use them
___Use these 4 hours after the first dose of misoprostol

Symptoms to Expect:
After taking the misoprostol, you may feel nauseated or even vomit. This is common for this medicine. Misoprostol causes cramping and bleeding, often with clots. This may be more than you get with your period. It is a good idea to put on a pad in case you start bleeding right away. The bleeding and cramps usually start 1 to 4 hours after you use the misoprostol, and may last for up to 6 hours. Although you may have a lot of bleeding, this is okay; this means that the medication is working. The bleeding is usually heavy for the first few hours and then gets lighter. Bleeding or spotting may last for several weeks, and it may stop and start several times.

If you continue to have a lot of pain or cramps, you can take 1 or 2 of the Vicodin® pills or more of the ibuprofen, or both. Ibuprofen and Vicodin® are different types of medication, and it is okay to take them together. You can also use a heating pad, or drink some warm tea or soup, to relieve the cramps or pain.

If you have questions or concerns:
You can call the 24-hour phone: ________________; leave a message with your number and a doctor will call you back. Call us if:

✓ You do not bleed at all after 24 hours of taking the second medication (misoprostol)
✓ You are soaking more than 4 pads in 2 hours
✓ Your pain is not better after using the medicines
✓ You have a fever over 100.4 F
✓ You get strong stomach pain or “feel sick” more than 24 hours after using the misoprostol

If you have other questions, are worried or scared, have heard different information from somewhere else, think something is going wrong or that you have an emergency, please call us.
(Please try again if your call does not go through the first time or if we do not call you back within a half hour.)

How do I know that the abortion worked?
Most people have cramps and bleeding after they take the medication, although some people do not have very heavy bleeding and that is okay. Many people know the abortion worked because they no longer feel pregnant. A pregnancy test will stay positive for a few weeks even though you will no longer be pregnant.

Follow-up:
Under most circumstances, you will not need to come to the clinic for a follow-up appointment. But you can schedule follow-up phone calls with your provider at 1 week and 4 weeks after your medication abortion. You can always reach us using the phone number above.

If you want to start birth control, you can begin using the method on the date we decided, even if you are bleeding. It is safe to go back to your regular activities as soon as you want to. You can have sex and/or use tampons whenever you are ready. You can take a shower or bath as soon as you want to. You can eat normally, although you may still feel nauseated for another few days because of pregnancy hormones.
